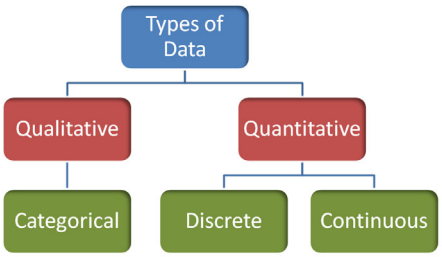
Types of Data

- Qualitative
  - Non-numeric
  - Always categorical
- Quantitative
  - Numeric
  - Categorical numbers are actually qualitative
  - Continuous or discrete

26

26

Types of Data



27

27

Levels of Data Measurement

- **Nominal:** Names or labels only
  - Example: What city do you live in?
- **Ordinal:** Data can be ranked, but no quantifiable difference.
  - Example: Ratings Excellent, Good, Fair, Poor
- **Interval:** Data can be ranked with quantifiable differences, but no true zero.
  - Example: Temperature
- **Ratio:** Data can be ranked with quantifiable differences and there is a true zero.
  - Example: Age

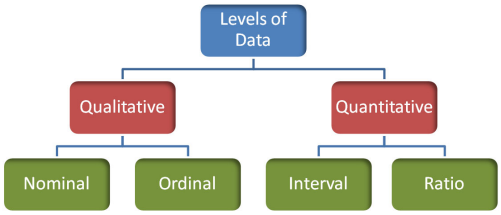
Levels of Data Measurement



29

29

Examples of Data

- Distance from De Anza College
- Number of Grandparents still alive
- Eye Color
- Amount you spend on food each week.
- Number of Social Media "Friends"
- Zip Code
- City you live in.
- Year of Birth
- How to prepare Steak? (rare, medium, well-done)
- Do you drive to De Anza?

Graphing Categorical Data

A sample of 500 adults (age 18 and over) from Santa Clara County, California were taken from the year 2000 United States Census.

Marital Status	Frequency
Married	270
Widowed	22
Divorced - not remarried	42
Separated	10
Single - never married	156
Total	**500**

32

32

Graphing Categorical Data

- **n = sample size -** The number of observations in your sample size.
- **Frequency -** the number of times a particular value is observed.
- **Relative frequency -** The proportion or percentage of times a particular value is observed.
- **Relative Frequency = Frequency / n**

Graphing Categorical Data

A sample of 500 adults (age 18 and over) from Santa Clara County, California were taken from the year 2000 United States Census.

Marital Status	Frequency	Relative Frequency
Married	270	270/500 = 0.540 or 54.0%
Widowed	22	22/500 = 0.044 or 4.4%
Divorced - not remarried	42	42/500 = 0.084 or 8.4%
Separated	10	10/500 = 0.020 or 2.0%
Single - never married	156	156/500 = 0.312 or 31.2%
Total	**500**	**500/500 = 1.000 or 100.0%**

Describing Numeric Data

- Center?
  - Where is an "average" value
- Spread?
  - How far are data spread from the center
- Shape?
  - Symmetric or skewed?
- Anything Unusual?
  - Outliers, more than 1 peak?

39

39

Grouping Data

- Choose the number of groups
  - between 5 and 10 is best
- Interval Width = (Range+1)/(Number of Groups)
  - Round **up** to a convenient value
- Start with lowest value and create the groups.
- Example – for 5 categories
  Interval Width = (58+1)/5 = 12 (rounded up)
